WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

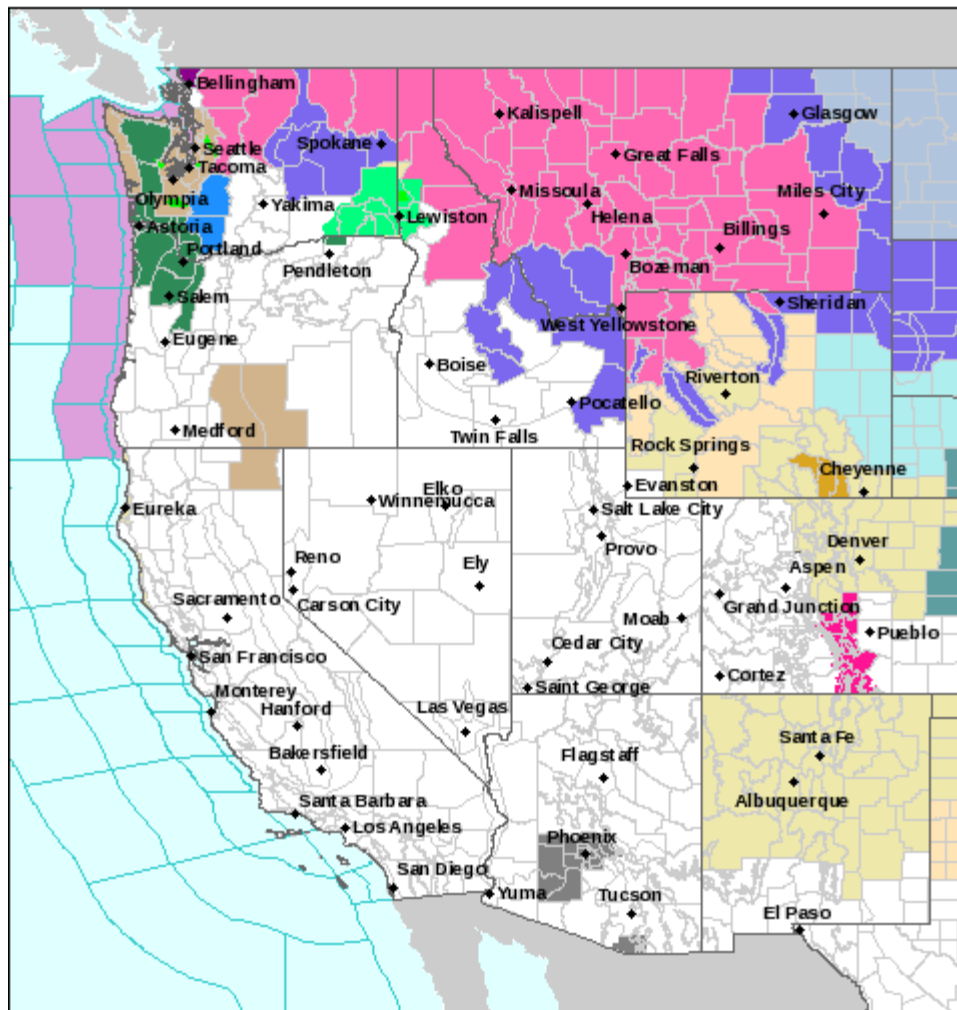

High pressure will produce dry and mild weather throughout the region until this afternoon. By this evening the high will weaken and move south as a winter weather system moves through the Pacific NW. The tail end of the cold front associated with the system will move into the far northern end of the region this evening and produce scattered light rain and mountain snow showers north of a line from Cape Mendocino to Alturas through Saturday afternoon. SW-W winds will gust to 30-40 mph in far northern and northeastern portions of the region tonight and Saturday, and to 50-60 in the most wind-prone mountain locations.

Computer models are now showing an offshore low pressure area becoming the main influence on the region's weather beginning Monday. The low will push warm moist air into the region from the SW, producing isolated to scattered mountain showers and occasional SE-SW breezes beginning Monday night. The rain and high elevation snow will increase in coverage and intensity beginning Wednesday.

SOUTHERN CALIFORNIA

Light offshore flow of 10-20 mph will continue over portions of the region before winds weaken before noon. Otherwise, expect light winds, sunny skies and near record high temperatures today. Expect highs to reach the 50s in the mountains to the mid 80s across lower elevations of the region. Minimum relative humidity (RH) will drop into the 8-12% range over many areas away from the coast during the afternoon. But light winds and mostly clear skies should allow good recovery tonight. Over the weekend, expect a cooling trend as light onshore flow develops. There will be a very noticeable increase in high clouds which will also lead to cooler afternoon temperatures into early next week. By New Year's Day, temperatures will be only slightly above normal with highs in the 60s and lower 70s across lower elevations. Minimum RH will continue to be very low for 6-8 hours each afternoon into early next week. A weak low may draw some subtropical moisture into the area later next week. This may allow for a few light showers to develop Wednesday into Thursday morning. Any resultant rainfall looks to be very light and snow levels would be very high. Look for skies to remain cloudy heading into the following weekend. No significant offshore winds are expected the next 7-10 days.
